

# Setting the Printer/PPD

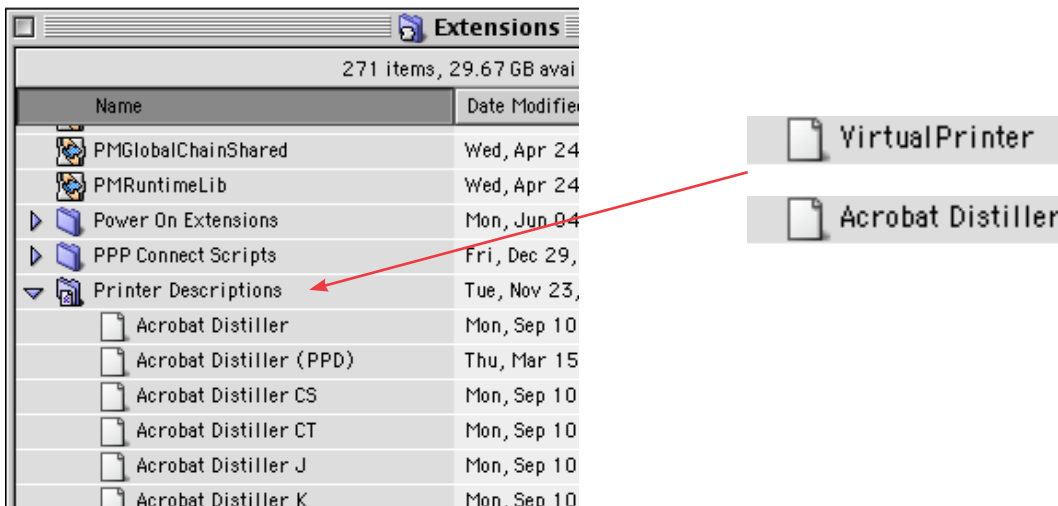

## Mac

### Setting up your system to generate a device independent PostScript file

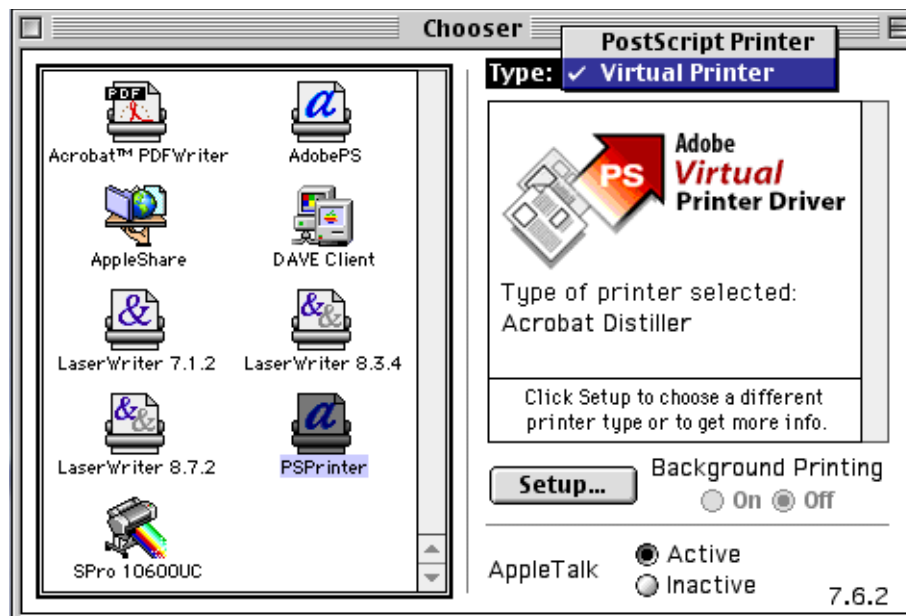

1. Locate the system folder inside the hard drive of your workstation. Inside the system folder you will find a folder named "Extensions".
2. Copy the "PS Printer" supplied into the Extensions folder.

3. Locate the folder inside the Extensions folder named "Printer Descriptions".
4. Copy the supplied "Virtual Printer" and the "Acrobat Distiller PPD", into the Printer Descriptions folder.

# Setting the Chooser Mac

## Selecting the Virtual Printer from the Chooser

1. Inside the Chooser, you should be able to select the PSPrinter. On the right of that window you will have the option of selecting a “PostScript Printer” or a “Virtual Printer”. Choose the Virtual Printer.
2. Press the “Setup” button.
3. In the Printer Descriptions window choose the Acrobat Distiller ppd.
4. You will receive a prompt telling you that there are no installable options. Click OK.
